SUMMARY

Software Engineer with 4+ years shipping production e-commerce storefronts in React, TypeScript, and Salesforce Commerce Cloud (SFRA/SFCC), with depth in accessibility (WCAG 2.1/ADA), front-end performance, and shared design systems. Recently extended into full-stack: designed and deployed a live Next.js 16 / React 19 app on Postgres with server-side auth, full-text search, automated testing, and CI. Seeking front-end or full-stack roles where accessible, performant UI is a first-class requirement, not an afterthought.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3, SASS/SCSS
- **Frameworks / Libraries:** React.js, Next.js (App Router, React Server Components, Server Actions), Node.js, Express, Tailwind CSS
- **E-Commerce:** Salesforce Commerce Cloud - SFRA, SiteGenesis, ISML, OCAPI/SCAPI, Page Designer
- **Data / Backend:** PostgreSQL, Postgres full-text search (tsvector/GIN), RESTful API design and integration, Zod schema validation
- **Testing / Tooling:** Jest, React Testing Library, unit and component testing, Git / Bitbucket (version control), CI/CD (GitHub Actions), AWS (Elastic Beanstalk, Docker), Vercel
- **Practices:** Accessibility (WCAG 2.1 / ADA), cross-browser compatibility, responsive design, code review, Agile / Scrum

PROFESSIONAL EXPERIENCE

Career Break - Independent Full-Stack Development | Columbus, OH May 2025 - Present

- Planned career break for travel and volunteer work (community service, homeless shelter support) while independently designing, building, and shipping recollections (see Projects) on a modern Next.js stack.

Frontend Developer | R.G. Barry Brands | Pickerington, OH May 2021 - May 2025

- Led site refreshes across 3 brand e-commerce storefronts, increasing mobile page load speed by ~20%.
- Designed and built reusable UI components that let non-technical merchants update content independently, reducing developer intervention time by ~40%.
- Migrated 3 legacy SiteGenesis storefronts to SFRA, replacing pipeline-based templates with cartridge-based controllers ahead of the SiteGenesis end-of-life deadline.
- Implemented ADA / WCAG 2.1 accessibility across all brand storefronts - keyboard navigation, ARIA labeling, and color contrast.
- Partnered with designers to build a shared SASS style guide, replacing duplicated per-site CSS across all 3 storefronts.

Software Developer, Intern | Sentinel Healthcare | Seattle, WA Jul 2018 - Jan 2019

- Deployed web applications to AWS using Elastic Beanstalk and Docker containers.
- Fixed bugs in REST API endpoints backed by SQL stored procedures; reviewed and approved teammate pull requests in Bitbucket.

ENGINEERING PROJECTS

recollections - Full-Stack Blog & Journaling Platform | Next.js, React 19, Postgres May 2025 - Present

- Designed, built, and deployed a live publishing platform on Next.js 16 (App Router, React Server Components, Server Actions) and React 19: Tiptap rich-text authoring with image uploads, search, pagination, and a responsive dark-mode Tailwind UI.
- Architected a server-first data layer - every query and mutation runs server-only against Neon serverless Postgres through tagged-template SQL rather than an ORM, keeping query cost explicit and database code out of the client bundle.
- Drove search and pagination entirely through URL parameters instead of client state, giving one server-rendered data path with shareable, back-button-correct results and no client/server sync to keep in step.
- Implemented Postgres full-text search with a trigger-maintained tsvector column, GIN index, and title-weighted ranking, so matching is an indexed lookup instead of an app-side scan on every keystroke.
- Enforced authentication and author-only authorization at every entry point; private posts fail closed against URL guessing, with access-checked image serving behind a dedicated route handler and a daily cron job that purges orphaned uploads.
- Wrote 84 unit and component tests across 12 suites (Jest, React Testing Library), run with lint and type-check on every push and pull request via GitHub Actions.

IoT Honeypot | React, Express

- Built four React workflows displaying attacker IP data and login attempts against a Linux server, including an IP-geolocation map (Google Maps API), backed by 11 Express.js REST endpoints, each with a dedicated SQL stored procedure.

EDUCATION

The Ohio State University | Columbus, OH December 2020

B.S. in Computer Science and Engineering, Minor in Studio Arts
